A MESSAGE FROM OUR FOUNDER

Dear Members of Trailhead Clinics,

Thank you for being part of changing healthcare in America! At Trailhead Clinics, we are always looking for ways to improve the health of its members and add value to your membership. We have recently requested and received an allotment of doses of REGEN-COV, a new life-saving monoclonal antibody treatment for patients diagnosed with COVID-19. On average, patients who receive this treatment recover from symptoms 4 days earlier and have a 71% decrease in the risk of hospitalization or death! Another important factor is the incidence of side effects with this treatment is very low. It is crucial to start the treatment as soon as possible after symptoms of COVID-19 start, so please do not delay getting tested. We are one of only a few locations on the Western Slope that have this treatment available currently. Even better, we have made this very affordable and accessible for ALL of our members who qualify as being "high risk" or are recommended by their Trailhead Provider. By offering the treatment at a fraction of what others are charging, we are doing our part to change the story of COVID-19 in our area. Since receiving the medication last week, we have administered several doses of REGEN-COV, and we expect to give many more because of the prevalence of COVID in our area. If you have any questions, please don't hesitate to schedule a visit (virtual or in-office) with your provider or shoot them a message using the Spruce app. At this time, the treatments are administered at our Grand Junction location, but all Trailhead Clinic members will have access if recommended by your provider. Treatments will only be available as long as we still have our allotted doses.

Your healthcare team appreciates your membership, and we look forward to taking care of you, your family, and your employees for years to come.
